# CERTAMEN 2 (t)

Remember: The evaluation considers not only the completion of the required contents, but also their analytical depth, methodological consistency, quality of supporting evidence, and effective communication.

# INSTRUCTIONS AND EVALUATION GUIDELINES

## 1. GENERAL INSTRUCTIONS

Certamen 2 is a cumulative group evaluation. Each group must submit the complete project, incorporating all corrections, feedback, and improvements from previous evaluation stages.
The submission must be a single PDF file, containing the updated project from its initial stages through the contents required for this Certamen.

### Submission and Evaluation Conditions

- Submission deadline: The PDF file must be uploaded to Canvas before the beginning of the scheduled evaluation period.
- Late submissions: Projects submitted after the evaluation period has started, but within the officially assigned evaluation time, will be accepted with a maximum possible grade of 5.0.
- Presentation: All group members must actively participate in the presentation.
- Format: Presentations must be self-explanatory, clearly structured, and designed to support an executive and coherent communication of the project's development, findings, and strategic implications.

## 2. REQUIRED CONTENTS

### PESTEL Analysis

The primary purpose of PESTEL analysis is to provide a comprehensive, systematic, and evidence-based mapping of the macroenvironment through rigorous secondary research and environmental scanning. Its focus is primarily descriptive and analytical, allowing for the identification and understanding of relevant factors, trends, and developments, including those that may be examined from different perspectives across multiple PESTEL dimensions. While this analysis may generate conclusions that inform subsequent strategic frameworks, particularly Porter's Five Forces and SWOT analysis, its primary purpose is not to classify findings as opportunities or threats. Students should therefore avoid premature strategic judgments and selective information gathering aimed at confirming preconceived assumptions.

- Develop a comprehensive, in-depth, and evidence-based PESTEL analysis, following the requirements and guidelines discussed in class.
- The objective is to provide a thorough descriptive and situational assessment of the current external environment, establishing a comprehensive understanding of the state of affairs at the country, industry, and, where relevant, global levels, according to the nature and characteristics of the business.
- The analysis must address the political, economic, social, technological, environmental, and legal dimensions, emphasizing depth, completeness, contextual understanding, and analytical rigor.
- Rather than presenting a superficial enumeration of factors, the analysis must provide a well-documented and comprehensive description of the conditions, developments, and dynamics shaping the environment in which the business operates.
- All findings must be supported by reliable, verifiable, and clearly identified sources, visibly integrated into the corresponding presentation slides.

## 3. SOURCES, EVIDENCE, AND PRESENTATION STANDARDS

- All information included in the PESTEL analysis must be supported by relevant, reliable, and verifiable sources.
- Sources must be clearly identified and visibly integrated into the corresponding slides, allowing the evidence supporting each analysis, finding, or conclusion to be easily traced.
- The presentation must be self-explanatory, ensuring that the information, supporting evidence, and analytical conclusions can be understood independently of the oral presentation.
- Special attention must be given to the clarity, organization, and logical connection between the different contents evaluated, facilitating an integrated understanding of the project and its strategic relevance.
